

ABSTRACT

A television stand in accordance with the principles of the present invention is retained in place by the front seats. In a preferred embodiment, a television stand in accordance with the principles of the present invention fits snugly between the front bucket seats of a vehicle. A television stand in accordance with the principles of the present invention is further retained by the positioning of the bottom plate in between the front bucket seat inner mounting rails. A television stand in accordance with the principles of the present invention is low enough for the vehicle's driver to see over it.
